

Information Security & Technology

power your business and protect critical systems and data from dynamic security threats

Information technology (IT) is what runs your business. From digital transformation to operations and more, IT powers your data-driven relationships, streamlines your business operations, and protects your data and accountholders from increasingly aggressive cyber threats.

jack henry™

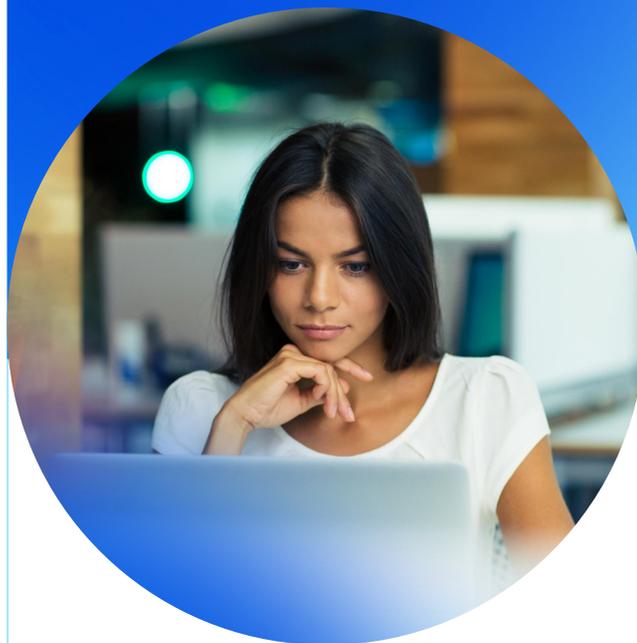

Managing the complexities within the ever-changing information security and technology business environment can be a daunting challenge. To succeed, you need the right provider – one with the comprehensive capabilities to deliver in-house, hosted, or managed solutions, supported by a team of industry-leading professionals to lead the way.

do you have the right provider to protect your reputation and mitigate risk?

In today's digital world, powering your infrastructure while protecting your data and consumers is more important than ever. However, there are many challenges that come with this, such as attracting, training, and retaining qualified and talented people – especially outside of major urban markets where finding local IT expertise is not always easy. In addition, your budget is either stagnant or you're being asked to do more with less. But regardless of the roadblocks you face, driving operational efficiency and protecting your data from evolving cybersecurity threats remain your most critical priorities.

Identifying a key provider to address the myriad of challenges you face is an important decision to proactively protect mission-critical data and gain opportunities for efficiencies. There's a lot at stake – for both you and your account holders, who expect nothing less than secure data and financial transactions.

Identifying a key provider to address the myriad of challenges you face is an important decision to proactively protect mission-critical data and gain opportunities for efficiencies.

what we offer

As a leading provider of information security and technology capabilities for financial institutions, Jack Henry® delivers sophisticated and powerful solutions that drive the results you need. We're committed to providing effective information security and technology capabilities that empower your financial institution to proactively protect your information while helping you achieve your strategic risk objectives.

In addition, we effectively defend against internal and external threats, secure mission-critical data and systems, enable compliance with related regulatory requirements, and ultimately protect your good reputation and assets.

● Cybersecurity

Implement a proactive, multi-layered approach to better navigate today's ever-changing cybersecurity and IT regulatory compliance landscape.

By replacing traditionally siloed cybersecurity efforts, Jack Henry's powerful solutions embrace a holistic approach to cybersecurity and enable you to effectively bolster your cybersecurity posture and more confidently serve your accountholders. Furthermore, you gain access to a team of certified cybersecurity and governance, risk, and compliance professionals and resources to support your financial institution's needs in meeting IT regulatory compliance directives.

Managed Security Services

- Managed security suite enables comprehensive visibility through aggregation of events across all systems and networks, ensuring your security controls are effective, lowering your risk profile, and reducing your total cost to mitigate cyber threats.

To succeed, you need the right provider – one with the comprehensive capabilities to deliver **in-house, hosted, or managed solutions, supported by a team of industry-leading professionals to lead the way.**

Governance, Risk, and Compliance (GRC)

- GRC solutions provide access to a team of certified cybersecurity and IT regulatory compliance experts who understand your business, help you address cyber risks, and help you navigate the ever-changing Federal Financial Institutions Examination Council (FFIEC) directives regarding the security of non-public information.

● Infrastructure

Gain scalability and accessibility while securing your mission-critical systems and data.

With our infrastructure solutions, Jack Henry can empower you to reduce your IT burden while leveraging the many benefits of the cloud; deliver customized, cost-effective network services that seamlessly accommodate your dynamic business environment; and provide the experience and infrastructure needed to make your data conversions accessible and secure.

Cloud Solutions

- Managed secure cloud services support your financial institution today and help you compete confidently in the future by improving business agility and reducing your IT burden. We offer expert, cohesive support for private, public, hybrid, and multi-cloud models.

Managed IT Services

- Ensure your IT environment is managed and maintained effectively by a highly trained staff while facilitating compliance with ever-changing regulations.

Network Services

- Secure and reliable network services (including hosted networks, on-premises networks, implementation, support, and unified communications) that can be customized to support your unique business needs.

Data Conversion Services

- Data conversion services that reduce costs and risks by converting and importing legacy system data as well as merger and acquisition content into current platforms.

● Disaster Preparedness

Maintain the ability to do business without interruption when the unexpected happens.

Jack Henry provides a comprehensive suite of disaster preparedness and prevention solutions that leverage proven technologies and industry best practices, empowering you, your employees, and your accountholders to do business without disruption when disaster strikes.

Data Backup and Recovery

- Jack Henry solutions facilitate disaster resiliency with production-proven disaster recovery solutions that help minimize potential business interruptions and financial losses due to the unexpected.

Sheltered Harbor Compliance

- Help ensure critical data sets are protected and services can continue if systems and backups are down due a catastrophic event with our data vaulting solution designed with Sheltered Harbor protocols.

In today's digital world, powering your infrastructure while protecting your data and consumers is more important than ever.
